

SAI GANESH REDDY GUNDA

+1-602-815-1151 | gunda.saireddy3@gmail.com | [linkedin.com/in/sai-ganesh-reddy](https://www.linkedin.com/in/sai-ganesh-reddy) | saiganeshreddy.dev

Technical Skills

Languages & Frameworks: Java, Spring Boot, Spring MVC, Spring Security, Spring Cloud, JavaScript, Node.js

Cloud & DevOps: OCI, AWS S3, AWS SQS, Azure AD B2C, Docker, Kubernetes

Databases: MongoDB, Oracle Database, PostgreSQL, Redis, Hibernate ORM, JDBC

Web Technologies: HTML5, CSS, REST APIs, Angular, TypeScript

Others: Strapi CMS, Azure DevOps, Terraform, Git, Microservices, OAuth 2.0, JWT, Role-Based Access Control, Audit Logging, Real-Time Processing, Event-Driven Architecture

Professional Experience

Senior Software Engineer - Oracle Inc., Nashville, Tennessee

Jan 2026 – Present

- Enabled cloud partners to offer license-included Windows instances by supporting a zero-cost platform SKU and partner-managed SPLA/KMS licensing models.
- Contributed to architecture removing a critical data-plane to control-plane dependency across an estimated 20+ regional deployments, shifting certificate-renewal metadata access to local host agents and reducing recurring control-plane calls by an estimated 80-90% from certificate renewal traffic.
- Designed signed instance and host metadata flows to automate certificate binding across estimated 100K+ hosts/instances, reducing recovery work and improving control-plane outage recovery readiness from hours to minutes
- Improved OCI deployment automation by implementing certificate data-source discovery, eliminating manual binding management and strengthening Terraform reconciliation for certificate and secret bindings during regional expansion.

Environment: Java, Terraform, REST APIs, React, OCI, SSL/TLS, PKI, JUnit, CI/CD, Jira

Senior Software Engineer I - Microchip Technology, Inc., Chandler, Arizona

May 2023 – Dec 2025

- Designed and implemented an event-driven microservice that automated post-order export compliance checks by integrating address translation, message queues, and dynamic workflow orchestration.
- Improved compliance-processing reliability and auditability by logging external API interactions, supporting region-specific rules, implementing automated alerts, and scheduling data-retention cleanup jobs.
- Built a distributed authentication platform using OAuth 2.0, JWT, and Azure AD B2C, enabling secure single sign-on across multi-tenant applications, social identity-provider integration, self-service account management, and role-based access control.
- Replaced legacy schedule-driven order-processing systems with an event-driven AWS SQS microservice, enabling real-time workflow orchestration and fault-tolerant synchronization with downstream systems.
- Developed an e-commerce platform for the Microchip Technology Conference 2024 with customized ordering, inventory, payment, and fulfillment workflows, enabling discounted, tax-free, and shipping-free purchases with hotel pickup.
- Automated Java-based notification jobs using Spring and SMTP to deliver inventory reports, renewal reminders, quote alerts, product-release announcements, and promotional communications.

Environment: Java, Spring Boot, REST APIs, AWS SQS, OAuth 2.0, JWT, Azure AD B2C, SMTP, Microservices, CI/CD

Software Engineer Intern - Microchip Technology, Inc., Chandler, Arizona

June 2022 – May 2023

- Built an automated multilingual translation pipeline using external language services, semantic-similarity scoring, and confidence-based human-review triggers, scaling content localization across more than 10 languages.
- Developed a secure translation-management platform with JWT-protected REST APIs and role-based access control, allowing authorized users to review, approve, and manage translated content.
- Led the migration of more than 37,000 content items from Sitecore to Strapi CMS by building automated ETL pipelines, REST APIs, and batch-based backup and image-transfer processes, reducing manual effort by 30% with zero data loss.
- Enabled business teams to independently manage website banners and FAQs by implementing role-based access, automated database backups, SSL-secured deployments, and integrations with existing Java applications.
- Developed a multithreaded data-integration job that aggregated and validated more than 130,000 product records daily from 32 external business-unit APIs, reducing weekly synchronization time by 50%.
- Improved high-volume JSON-processing reliability through automated retries, email alerts, validation controls, and structured error handling.

Environment: Java 17, Spring Boot, REST APIs, AWS S3, AWS SQS, SQL Server, MongoDB, Maven, Git, OpenTelemetry, Quartz Scheduler, OAuth 2.0, JWT, SMTP

Software Engineer - Tata Consultancy Services, India

Aug 2020 – July 2021

- Implemented deal-pricing functionality that improved net pricing for active deals by at least 1%, supporting sales productivity, operational efficiency, and partner transaction volume.
- Designed and deployed an automated consumer API that retrieved and mapped missing product data from external systems and streamed it through Kafka, improving pipeline accuracy by 15%.
- Corrected backend mappings for approximately \$90 million in product data, improving data quality and supporting customer-experience revenue initiatives.
- Enhanced order fulfillment by introducing functionality that divided large-quantity orders into smaller shipments, accelerating delivery and improving customer satisfaction.
- Supported automated software delivery in an Agile environment using Jenkins for continuous integration, Bitbucket for version control, and Jira for sprint planning and issue tracking.

Environment: Java, Spring Boot, REST APIs, AngularJS, Kafka, MongoDB, Jenkins, CI/CD, Bitbucket, Jira, SSL/TLS, Postman

Education

Arizona State University - Master of Science in Computer Science; GPA: 4.0

Aug 2021 – May 2023

VIT University - Bachelor of Technology in Information Technology; GPA: 3.8

Jul 2016 – Jun 2020

Academic Projects

Secure Hospital System Website | Java, Spring, MySQL, AngularJS, Hyperledger Fabric

Jan 2022 – May 2022

- Developed a secure hospital management website with multiple security controls to protect against cyberattacks and integrated digital assistants to improve user support.

American Sign Language Fingerspelling | Python, PoseNet, CNN, Image Segmentation, TensorFlow Aug 2021 – Dec 2021

- Built a real-time ASL fingerspelling translator that used PoseNet to identify wrist coordinates and a CNN trained on segmented images to recognize hand signs.

Semantic Search and Tag Prediction | Python, LSTM, Word2Vec, TensorFlow

Jan 2020 – Jul 2020

- Generated word embeddings using Word2Vec and trained an LSTM-based tag classifier, achieving a validation loss of less than 5%.

Achievements & Extracurricular Activities

Academic Excellence Gold Medal - Arizona State University, Tempe, AZ

Aug 2021 – May 2023

Graduate Student Assistant - Arizona State University, Tempe, AZ

Aug 2021 – May 2022

Dean's Academic Scholarship Recipient - VIT University, India

Jul 2016 – Jun 2020
